

Hospital in the Home

Hospital in the Home (HITH) is a service that allows continuation of treatment and care of patients at home.

The service enables our patients to be discharged earlier than would otherwise be possible due to the ongoing and continuous care by our staff in the patient's home.

Treatment may include intravenous injections, blood tests, monitoring of medication changes, wound management, physiotherapy or education.

If your condition is suitable for this program you will be given the choice of continuing your treatment in the comfort of your own home. If you believe that this service would benefit you, please talk to your nurse or doctor.
